Joystick System for Sterndrive

JC10

***Superior Performance and Comfort
Sterndrive Joystick System!***

YANMAR JOYSTICK FOR STERNDRIVE

- **Easy docking & maneuvering**
- **Quiet & ultra smooth**
- **Shock free shifting due to hydraulic clutch**
- **Interconnective**

JC10 brings joystick control to sterndrive

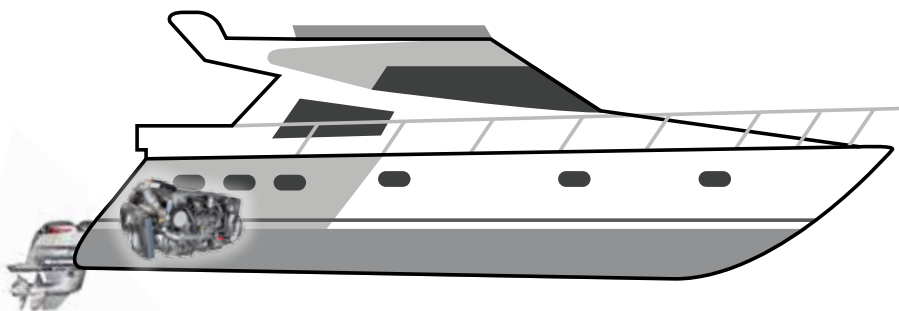

The YANMAR JC10 joystick system is suitable for 30-45 ft. motor yachts, express cruisers and tenders equipped with YANMAR ZT370 Sterndrive.

With the JC10 Sterndrive Joystick System every boat owner can enjoy the easiest way of maneuvering and docking. It enables the skipper to manage twin-engine trains plus sterndrives and it will make docking even easier than parking your car.

How it works

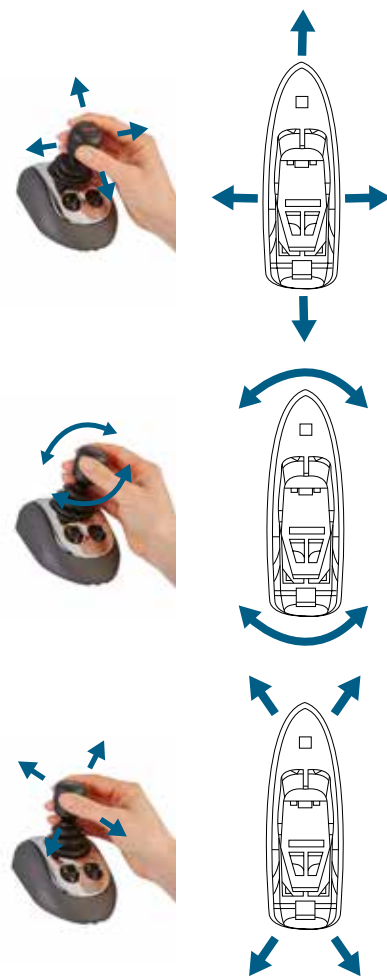

The JC10 provides the easiest operation just by pressing the joystick gently in the desired direction of movement. It automatically directs the speed of the two engines and sterndrives to bring the bow round precisely where needed.

YANMAR JC10 joystick system is especially designed for use with YANMAR Marine 8LV sterndrive diesel engines & YANMAR ZT370 sterndrives.

EASY & COMFORTABLE

docking & maneuvering in every desired direction
