YANMAR JOYSTICK DOCKING

- **Easy, smooth & affordable**
- **User friendly**
- **Docking in every direction**
- **Accurate control & response**

JC20 brings joystick control to shaft drive

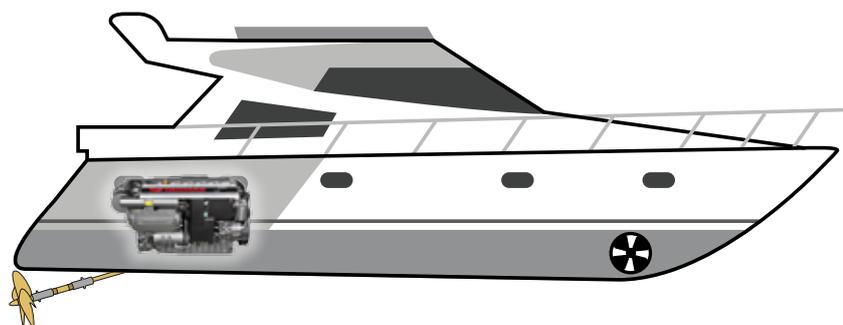

With the all-new YANMAR JC20 inboard joystick docking system every motorboat, powerboat and even catamaran owner can now enjoy the easiest way of docking.

The JC20 stands for the latest in sophisticated electronic control to enable the skipper to manage twin-engine shaft drive trains plus a bowthruster and make docking even easier than parking your car. And all at an affordable price.

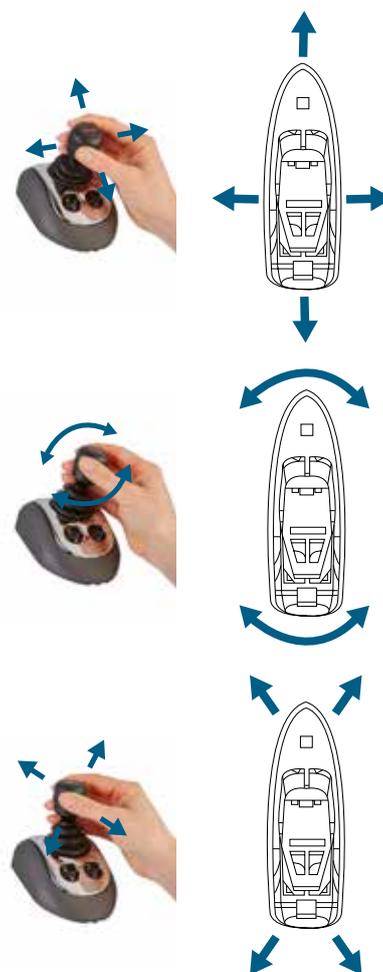

How it works

The JC20 provides the easiest operation just by pressing the joystick gently in the desired direction of movement. It automatically directs the speeds of the two engines and uses the thruster to bring the bow round precisely where needed.

YANMAR JC20 inboard joystick docking system is especially designed for use with YANMAR Marine common-rail engines.

EASY & SMOOTH
docking in every desired direction
